Abstract (en)  
[origin: WO2014094735A1] The invention relates to a cardboard packaging (1) which is produced without tools from a flat packaging blank by way of simple manual folds and serves for packaging elongate objects which are angled away on the end side. To this end, the cardboard packaging (1) consists of a rectangular middle part (3) and two rectangular side parts (4) which are arranged symmetrically on opposite sides of the middle part (3) and are arranged inclined at the same angle with respect to said middle part (3), which results in a concave upper side and a convex lower side of the cardboard packaging (1). In contrast, the front sides of the side parts (4) and of the middle part (3) and the rear sides of the side parts (4) and of the middle part (3) in each case form planes which run in parallel, wherein overlapping regions (13) result between the side parts (4) and the middle part (3). The surfaces (6) of the side parts (4) are connected to the surface (5) of the middle part (3) in each case by two tuck-in tab connections which are configured as a countertuck-in-tab connection.
