Abstract (en)
[origin: WO2013186087A1] The invention relates to a container (1) which comprises a first plurality of strips (11-1 to 11-15) which, in the unfolded state, form the base surface and at least one end wall of the container, and a second plurality of strips (12-1 to 12-9, 12-10 to 12-18) which, in the unfolded state, form at least one side wall of the container, the container in the unfolded state having a height, a length and a width, and wherein the container in the collapsed state can be substantially reduced to the width. Therefore optimal compact dimensioning of the container in the collapsed state is achieved.
