Abstract (en)
[origin: WO2013189869A1] An instantaneous heater (1) has a body formed from at least two layers (10, 13, 20, 21) extending around an axis (A). Of these layers, an outer layer (10) is furnished with a channel (12) which is formed in a wall (14) of the layer (10) and turns about the axis (A) with approximately the shape of a helical line, the channel having an inflow (18) at one end for a fluid to be heated and an outflow (19) at the other end. An inner layer (13) with a heating coil (3a) adjoins this outer layer (10). Adjoining the inner layer (13), at least one insulation layer (20, 21) is provided in the interior.
