Abstract (en)

[origin: WO2013189998A1] The invention relates to escape door control by means of a control device (320, 330, 340), comprising an input apparatus (3300) for receiving a current state of the escape door control; a memory (3100, 3200) for storing an operating system of the control device (320, 330, 340) and an application program; a processor (3000) for executing the operating system and the application program, wherein values for controlling the escape door control are determined from the current state of the escape door control by means of the application program; and an output apparatus (3400) for outputting the determined values. The invention further relates to a corresponding method and system.
