Abstract (en)

[origin: WO2013185955A2] The invention devises a switching device (10) for a battery (2), comprising: a control device (1); and a control switch (S); wherein, by means of the switch (S) activated by the control device (1), cells (Z) of the battery (2) can be wired to one another variably in such a way that a terminal voltage of the battery (2) is substantially independent of the state of charge of the cells (Z).
