Abstract (en)
[origin: CN104552455A] The invention relates to a bench-type die cutting- and/or -punching machine (100) with a stamping and / or -punching gestation (2) comprising an upper table (10) and a sub-table (9). The sub table (9) has a plurality of matrix-like arranged side by side Metal blocks (101), for example of aluminum, and wherein each metal blocks (101) has an regardless controllable heating means (104) for selectively heating of a respective metal pad (101). The heating process causes advantageously an expansion of the metal stud (101), so that, for preparing the stamping and / or -punching gestation (2) with the Metal block (101).
