Abstract (en)
[origin: EP2863126A1] [Objective] To improve durability of a glow plug having a heat-generating element formed primarily of tungsten (W) or molybdenum (Mo). [Means for Solution] A glow plug includes a tubular member having a tubular shape; a heat-generating element disposed within the tubular member and adapted to generate heat through application of electricity thereto; and a connection portion which connects the tubular member and the heat-generating element and has a fusion zone formed as a result of welding to the heat-generating element. The heat-generating element is formed primarily of tungsten (W) or molybdenum (Mo). That portion of the fusion zone which extends up to at least 20 µm from an interface with the heat-generating element does not contain nickel (Ni).
