Abstract (en)
[origin: WO2013191704A1] Provided herein are novel cabergoline analogs and compositions thereof. In other embodiments, provided herein are methods of treatment, prevention, or amelioration of a variety of medical disorders such as, for example, migraine and Parkinson's disease using the compounds and compositions disclosed herein. In still other embodiments, provided herein are methods of agonizing dopaminergic D2 receptors and/or antagonizing or inhibiting activity of receptors such as the 5-HT₂ serotonin receptors using the compounds and compositions disclosed herein. In still other embodiments, provided herein are methods of agonizing receptors such as, for example, the 5-HT_{1D} and/or the 5-HT_{1B} receptor, without agonizing (or very weakly agonising) the 5-HT_{2B} receptor using the compounds and compositions disclosed herein.
