Abstract (en)  
[origin: WO2014003708A1] A retrofit system for tethering a hand tool includes a tool collar having a collar body, a first body end, a second body end, a skirt at the second body end having an outer diameter larger than an outer diameter of the collar body, and a bore extending longitudinally therethrough, and a tethering tab having a first tab opening and a second tab opening transverse to the longitudinal axis of the tethering tab. The tool collar is made of a material having a Shore A hardness in the range of about 20 to about 50. The second tab opening of the tethering tab being spaced from the first tab opening and the first tab opening having a cross-sectional area larger than the cross-sectional area of the first tool portion providing for free rotation of the tethering tab around the first tool portion.
