Abstract (en)
[origin: WO2014001265A1] The invention relates to a bearing shell for receiving a rolling contact bearing or ball bearing, with a cylindrical main body, in which a rolling contact bearing or ball bearing can be received, and the main body consists of a flowable material that contacts the rolling contact bearing in a sticking manner when the bearing shell is under load, such that the rolling contact bearing is retained so as to be secured against rotation in the main body. The invention further relates to a bearing comprising such a bearing shell for rotationally movable connection of two parts, and to a two wheeled vehicle having at least one such bearing.
