Abstract (en)

[origin: CN104544531A] The present invention relates to a device (2) and a method for loosening tobacco (T) in a process roller (4), wherein the loosened tobacco (T*) can be discharged from an inner chamber of the process roller (4) with a specific temperature. The device and the method are provided with at least one temperature sensor (52, 54) for detecting the temperature (60) of the loosened tobacco (T*) and a fresh air transmission unit (21) used for transmitting fresh air (A) to process air and provided with a first volume flow regulator (36), wherein volume flow of the defined fresh air (A) can be influenced according to the detected temperature (60) of the loosened tobacco (T*).
