Abstract (en)

[origin: JP2015047164A] PROBLEM TO BE SOLVED: To provide an apparatus and method for inspecting a capsule filled with liquid in a filter of cigarettes with filters, in which quality assurance of a rod-shaped article of a tobacco processing industry after completion of processing is ensured, and the article is transferred at a right angle to its axis.SOLUTION: At least one capacitive high-frequency measuring instrument 30 has at least one through passage 40 of sideways-facing with one side or both sides opened extending in the longitudinal direction for a protruded portion 15 across each trough of a rod-shaped article 14 along a transfer path of the article 14. The at least one through passage 40 passes across at least one measurement capacitor 34. Accordingly, the protruded portion 15 of the rod-shaped article 14 crosses a high frequency measurement electromagnetic field of the at least one measurement capacitor 34 on a transfer path passing along the through passage 40.
