Abstract (en)  
A drafting device (6) drafts a sliver (S) to form a fiber bundle (F). The drafting device (6) includes plural roller pairs, a first regulating member (74) and a second regulating member (77). The roller pairs convey the sliver (S) from an upstream side to a downstream side while drafting the sliver (S). The first regulating member (74) and the second regulating member (77) separately regulate the width of the sliver (S). The roller pairs include a back roller pair (61) arranged on the extreme upstream side and a front roller pair (65) arranged on the extreme downstream side. The first regulating member (74) is arranged between the back roller pair (61) and the front roller pair (65). The second regulating member (77) is arranged between the first regulating member (74) and the front roller pair (65).
