Abstract (en)
[origin: EP2865801A1] Laundry washing machine (100) comprising a detergent dispensing assembly (1) which comprises a detergent drawer (2), and a water delivery member (8) being provided with at least one internal water supply duct (11) which extends inside the body of the water delivery member (8) and is structured so as to channel the fresh water towards a shower-making portion (9); said water delivery member (8) comprising a first (12) and a second, reciprocally overlapped, plate-like elements (13), and said at least one water supply duct (11) being laterally delimited, in the interspace between said first (12) and said second plate-like elements (13), by two first partitioning ribs (14) each protruding from the inner face (15, 16) of the first or second plate-like element (12, 13) towards the other plate-like element (13, 12), and watertight merged via vibration welding to the body of said second plate-like element (13, 12). At least a segment of the internal water supply duct (11) is additionally laterally delimited by two second partitioning ribs (17) each protruding from the inner face (15, 16) of the first (12) or second plate-like element (13) inside the lane laterally delimited by the first partitioning ribs (14), and extending towards the other plate-like element (12, 13) up to rest with the crest line of the ribs (17a) in abutment against the conjugated inner face (15, 16) of said other plate-like element (12, 13).
