Abstract (en)
[origin: EP2865825A1] A lock cylinder arrangement for fixation to a lock casing and for control of a lock mechanism arranged in the lock casing. The arrangement comprises; a cylinder housing (2c) having a first axial end (2a) arranged to be positioned distal to the lock casing and a second axial end (2b) being opposite to the first axial end and arranged to be positioned proximal to the lock casing. A cylinder core (2d) is rotatably accommodated in the cylinder housing. A number of fixation bores (5, 6, 6a, 6b, 6'b, 6"a) extend axially through the lock housing, from the first axial end to the second axial end. A corresponding number of fixation devices (3, 3', 3", 4), are provided, each fixation device being arranged to extend through a respective bore for fixation of the cylinder housing to the lock casing. A number of drill protection members (3'b, 3"b, 14, 13, 11) are removably received in a corresponding recess (6, 2e, 15, 16) arranged in the cylinder housing. The drill protection members are fixed in position in their respective recesses by means of said fixation devices (3, 3', 3", 4).
