Abstract (en)

The present invention relates to a refrigerator illumination device, comprising: a cabinet, a drawer disposed in the cabinet, a door coupled to the drawer, a support structure disposed in the cabinet, and a light mount assembly disposed on the support structure, the drawer being capable of moving forward and backward with the door; wherein the refrigerator illumination device further comprises: a regulating assembly, configured to coordinately control a rotation action of the light mount assembly, when the door is opened, the regulating assembly being capable of controlling the light mount assembly to provide light towards the drawer. The present invention avoids the illumination blind spots, and is simple in structure and convenient in control.
