Abstract (en)

[origin: WO2014001255A1] In order to improve an apparatus (10) for storing and/or transporting a plurality of packaging containers (12), comprising a tray-like lower part (16) and an upper part (18) for closing the lower part in a closed position, in which the lower part and the upper part enclose an interior space (22) of the apparatus, wherein the lower part comprises a base (24) and a lower-part wall (36) rising up from the base in the direction of the upper part, in such a way that the packaging containers can be easily removed from it, it is proposed for the lower part to comprise a wall element (46) that forms, with the lower-part wall, a peripheral wall (50) of the lower part and for the wall element to be separable from the lower part.
