Abstract (en)
[origin: WO2014001733A1] The invention proposes a method for diagnosing a system for storing a gas, the gas being stored by sorption on a compound, the system being mounted onboard a vehicle and comprising a tank capable of containing the compound and a control device capable of controlling a heating device in order to increase the temperature of the compound in such a way as to release the gas. The control device is such that it obtains (E21) a set of information comprising at least one measurement of the temperature of the system, then carries out an estimation (E22) of the gas pressure in the system by using a predetermined kinetic model of desorption of the gas.
