Abstract (en)
[origin: WO2014001126A1] A piston fuel pump (18) for an internal combustion engine comprises a non-return outlet valve (38) with a valve body (48) and a valve spring (60). According to the invention, the valve body (48), in a closed idle condition, is at a distance A from the valve spring (60) in the direction of opening such that the valve body (48) can be moved by distance A when the valve (38) is opened before the valve spring (60) is loaded.
