Abstract (en)

[origin: WO2014000280A1] An approach for providing task-based service recommendations based on semantics is described. A task-based service recommendation platform determines an input for specifying at least one term of at least one task-based query. The task-based service recommendation platform determines one or more word groupings based, at least in part, on the at least one term. The task-based service recommendation platform determines one or more responses to the at least one task-based query based, at least in part, on a correlation of the one or more responses to the one or more word groupings.
