Abstract (en)

[origin: WO2014001009A1] Video monitoring in the public domain or in companies is widely used today. For this, a large number of cameras are typically used, particularly when monitoring extensive areas, such as at airports. A display apparatus (1) for a video monitoring system (2), wherein the video monitoring system (2) is designed to monitor a monitoring area with a plurality of monitoring cameras (3, 3a, b, c, d), is proposed, comprising a model module (7), wherein the model module (7) provides a model (8) of the monitoring area with the monitoring cameras (3, 3a, b, c, d), a display module (19) and a display device (4), wherein the display module (19) is designed to display the model (8) on the display device (4), a processing module (16), wherein the processing module (16) is designed to select at least one monitoring camera (3, 3a, b, c, d) as a selected monitoring camera (3a, b) that is oriented or can be oriented onto a selected location (15), and having a selection module (5), wherein the selection module (5) is designed to interactively select a freely selectable location in the display model (8) as the selected location (15).
