Abstract (en)
In an elevator, guide rails for respectively guiding a car and a counterweight are arranged in a hoistway by means of a rail mounting device. A part of the hoistway is formed by a first inner wall surface and a second inner wall surface that is perpendicular to the first inner wall surface. The rail mounting device has a first wall-fixing portion and a second wall-fixing portion that are fixed to the first and second inner wall surfaces, respectively, and a mounting portion which is provided to at least one of the first and second wall-fixing portions and to which each guide rail is mounted. The first wall-fixing portion, the second wall-fixing portion, and the mounting portion are formed integrally with one another.
