Abstract (en)
[origin: WO2014005837A2] The invention relates to an electrically driven rail vehicle (1) comprising at least one current collector (2, 3, 4, 5) arranged in the region of the chassis, and an electric line (9, 10) between the current collector (2, 3, 4, 5) and a junction box (11). A current measuring device (6, 7) is arranged in the course of the electric line (9, 10), which determines the current (i1, i2) flowing in the line (6, 7) and transmits a signal corresponding to the current strength (i1, i2) to an evaluation device (8).
