Abstract (en)
[origin: WO2015007255A1] The invention relates to a conveyor device for printed circuit boards (4). The conveyor device comprises a carrier means (1) that continuously circulates between conveyor wheels and is linearly guided in some sections. On said carrier means (1), at least one carrier element (2) is arranged for placing the printed circuit board (4) in order for it to be supported, as well as at least one resilient clamping element (5) for clamping the printed circuit board (4) onto said carrier element (2). The clamping element (5) can be moved back and forth, using a switching device (9), between a clamping element (5) opening position in which the printed circuit board (4) can be loosely placed on said carrier element (2), and a clamping element (5) spring-loaded closure position in which the printed circuit board (4) can be pressed onto the carrier element (2) by the clamping element (5).
