Abstract (en)

[origin: WO2014005600A2] An LED module(6)is disclosed being configured for being combined with one or more similar LED modules to form at least part of an LED display system(11), said LED module comprising an LED panel (1) comprising a first printed circuit board (2) with a plurality of LEDs(3)placed on a front side thereof and a power supply unit (5) comprising a second printed circuit board configured for being physically connected to a back side of the LED panel. Furthermore, a modular LED display system (11) comprising one or more such LED modules and a computer controllable light and colour therapy panel (7) comprising such a modular LED display system and arranged so that the light of each of the LEDs of the LED display system may be controlled and changed in chromaticity and/or intensity are disclosed.
