Abstract (en)
[origin: WO2014005573A1] The invention relates to a method for connecting an electric component to an electrical component support and an electric component for an electrical component support, in particular for a motor vehicle. According to the invention, an electric component is connected to an electric component support which comprises a base part and an electric conductor paths arranged therein. At least one electric contact connected to the electric component is moved in the base part such that the electric contact is electrically connected to the conductor path. The invention also relates to two electric contacts which are connected to the electric components and which are connected, according to the claims, to two different conductor paths in the base part. Said electric components can comprise more than two electric contacts, which according to the claimed method, are connected to the conductor paths of the base part.
