Abstract (en)  
[origin: US2015122758A1] A furniture pull-down shelf has first and second opposed lateral webs delimiting a shelf receptacle. First and second pairs of pivot levers are pivotably secured on first and second opposed furniture sidewalls and on the first and second lateral webs and define first and second four-bar linkages. The first and second four-bar linkages transfer the shelf from a stowed position inside the furniture into a lowered access position. An operating element is connected to first pivot levers of the first and second pairs of pivot levers. It extends in an initial operating position along a front side of the shelf receptacle. When pivoting the pull-down shelf into the access position, the connecting element moves from the initial operating position into a downward open operating position.
