Abstract (en)

The invention relates to a device for performing well interventions offshore. The device comprises a jack-up platform which comprises a height-adjustable horizontal work deck which is supported by vertical legs supporting on an underwater bottom; a frame of frame parts connected rigidly to each other which comprises at least two horizontal frame floors of mutually connected frame floor parts, which frame is connected with a work deck part to the work deck for movement in horizontal directions over the work deck, and which frame protrudes with an operative part beyond a side edge of the work deck. The invention also relates to a method for performing well interventions offshore making use of the invented device.
