Abstract (en)

[origin: US2015129168A1] A heat exchanger includes a housing designed to envelop a heat-exchange core bundle. The housing includes an opening that allows the heat-exchange core bundle to be housed inside the housing. The heat-exchange core bundle includes a first end designed to plug the opening of the housing when the heat-exchange core bundle is inserted inside the housing, and a second end of the heat-exchange core bundle, opposite the first end, with at least one fastening means in the form of a peg, for fastening the second end of the heat-exchange core bundle to the wall of the housing.
