Abstract (en)

[origin: WO2014009322A1] The present invention relates to the specific use of fungicidal combinations comprising (a) bixafen and (b) tebuconazole for increasing the tolerance of a plant species from the family of true grasses (Poaceae) towards at least one abiotic stress factor. In particular, the present invention relates to the specific use of fungicidal combinations comprising (a) bixafen and (b) tebuconazole for increasing the tolerance of a plant species from the family of true grasses (Poaceae) towards at least one abiotic stress factor, where that increased tolerance of the plant towards the at least one stress factor is exemplified by an increased yield and/or an improved physiological condition of the plant.
