Abstract (en)

[origin: WO2014009038A1] The invention relates to a surgical tool in the form of a gas delivery device (1) for delivering gas into the area of a site in the human or animal body that has been temporarily opened by a surgical intervention, with a gas delivery line (2), which can be connected to a gas source, and with a gas outlet area (3) having at least one gas outlet opening (4), preferably a multiplicity of gas outlet openings (4). To make a flow of gas identifiable, the gas delivery device (1) has a gas flow indicator (5).
