Abstract (en)

[origin: WO2014205470A1] The invention concerns a biting and comforter device (3) for infants, with a cloth (1), which has at least one slit-like aperture (6), and with at least one biting element (2) which comprises at least one peripherally closed through-aperture (16), the through-aperture (16) and the slit-like aperture (6) being configured such that a section (20) of the cloth (1) can be passed both through the through-opening (16) in the biting element (2) and through the slit-like aperture (6) in the cloth (1), such that the biting element (2) can be connected to the cloth (1) in a loop-like arrangement of the cloth (1).
