Abstract (en)
[origin: CA2887650A1] The invention relates to a holding and transporting device for intermediate products (10), in particular for boards heated for hot forming or pre-formed shaped components, having at least one tactile temperature measuring sensor (6), which is integrated in the holding and transporting device in such a way that the sensor is in touching contact with the intermediate product (10) during the transport. The tactile temperature measuring sensor (6) for contacting the intermediate product (10) is preferably held such that it can be displaced resiliently counter to an elastic preload. In particular, the holding and transporting device has at least one gripper having an abutment (2) and a gripper element (3) that can be moved with respect to the latter, wherein the temperature measuring sensor (6) is arranged on the abutment (2).
