Abstract (en)

[origin: WO2014009262A1] The invention relates to a method for controlling an interior lighting system (25) in a vehicle (18), comprising a plurality of lighting means (26a - 26g) that can be controlled independently of each other. According to the invention, a moving light pattern, especially a wave light pattern, is generated depending on vehicle operating data by separately controlling the individual lighting means (26a - 26g), all lighting means (26a - 26g) being controlled with the same or similar light pattern, and the lighting means (26a - 26g) being controlled to generate the light pattern in a time-offset manner. The time-offset with which the lighting means (26a - 26g) are controlled depends on the speed of the vehicle.
