Abstract (en)

[origin: WO2014011223A1] A squeezable bottle includes a panel having at least one ornamental feature thereon. The panel includes a first facet having a length and a width and a second facet having a length and width. The lengths of the first and second facets extend in a direction generally parallel to a length of the squeezable bottle. The second facet is disposed adjacent to and defines a first interface with the first facet, and the first interface defines a first one of the at least one ornamental features. A generally planar surface of the first facet is disposed at an angle relative to a generally planar surface of the second facet such that the panel is reversibly deformable.
