Abstract (en)  
[origin: WO2014009253A1] An adjustable roller-guide shoe (9) for guiding a lift car (2) or a counterweight (3) of a lift installation (1) contains a roller carrier (10), which can be fastened on the car (2) or the counterweight (3), a guide roller (11) and a roller spindle (13), which is arranged in the roller carrier (10) and is intended for accommodating the guide roller (11). The roller spindle (13) is positioned in the roller carrier (10) by means of an adapter (18), wherein the adapter (18) has an installation contour (19) which matches a corresponding accommodating contour (29) of the roller carrier (10). The adapter (18) is configured such that it can be fixed in different installation positions in relation to the roller carrier (10), and thus the roller spindle (13) can be placed in different positions in the roller carrier (10), depending on the installation position of the adapter (18). It is thus possible for the roller-guide shoe (9) to be operated straightforwardly with different roller diameters or to be adapted to different rail-web dimensions.
