Abstract (en)

[origin: WO2014009166A1] The invention relates to a method and a device for monitoring a passenger transport installation, specifically for monitoring the entraining elements (5, 6, 18, 19, 37, 42) that establish a connection of a plate link chain to a step (1) or pallet (29) of the passenger transport installation, wherein a triggering element (11, 12, 25, 26, 27, 43) is provided at the entraining element, which triggering element triggers an alarm state if a specifiable motion of the entraining element is detected or if at least one safety element is missing.
