Abstract (en)
[origin: WO2014009617A2] The invention relates to a system for managing the unlocking of a device for identifying a commercial item which comprises at least two elements capable of assuming a locked position in which they enclose the article between them, and an unlocked position. The system comprises a device for unlocking the identification device, means for preventing unlocking, which are activated, and decision means for deciding whether to deactivate or not deactivate said means for preventing unlocking. The decision means are capable of deciding on the basis of the identification or lack of identification of the association of the identification device and the commercial item to which said device is attached.
