Abstract (en)
[origin: WO2014009670A1] The invention relates to an actuated-stroke actuator having at least one additional pyrotechnic charge in order to adapt the anti-return resistance according to a desired development. According to the invention, at least one additional pyrotechnic charge (21a-21c) is placed in a recess communicating with the expansion chamber (24) of the actuator (11).
