Abstract (en)  
[origin: WO2014008523A1] The invention relates to a lighting device (1) for a motor vehicle comprising at least one, for example, two or more, light units (2), wherein each light unit (2) comprises: a reflector (3), and at least one light source (4) associated with the reflector (3), wherein light from the at least one light source (4) is radiated via the associated reflector (3), in the installed state of the lighting device (1), into a region in front of the vehicle, and the light source(s)(4) are arranged, preferably fixedly arranged, on at least one mounting body (5), preferably on a common mounting body (5). According to the invention the reflector (3) of the at least one light unit (2), in the case of two or more light units (2) at least one reflector (3), preferably two or more reflectors (3) of two or more light units (2), more especially all reflectors (3), is/are mounted on the at least one mounting body (5) so as to pivot about at least one axis associated with the respective reflector (3), for example, a vertical axis (Z), and can be fixed in a pivoted position.
