Abstract (en)

[origin: WO2014009933A1] The present invention includes a computer mouse (1) for use with a computer (2), including: - a base (3) with a lower surface (4) configured for sliding across a work surface (5), said lower surface (4) having at least one portion forming part of a base contact plane (7); - an upper body (8), extending from the base (3); - at least one contact sensor (15, 16); - a movement sensor system (17, 18), capable of detecting mouse (1) movement relative to said work surface (5); - a communication system, for communicating computer-readable movement and/or position data signals from the device (1) to a computer (2), said movement data signals indicating said detected mouse (1) movement and said position data signals indicating a position of the mouse (1) characterised in that the mouse (1) is configured to operate in a first and second modes.
