Abstract (en)
[origin: EP2873864A1] A rotary compressor 100 includes a hermetic container 1, a second cylinder 15, a second piston 28, a lower bearing member 7 (end plate member), a second vane 33, a second suction port 20, a second discharge port 41, a second closing member 10 and an oil retaining section 53. The second closing member 10 is mounted on the lower bearing member 7 such that a refrigerant discharge space 52 as a flow path for refrigerant discharged from a second discharge chamber 26b through the second discharge port 41 is formed on the opposite side from a second cylinder chamber 26. The refrigerant discharge space 52 is a space formed by substantially a minimum projection surface of a valve stop, a penetrating flow path 46 and a passage 45. Hence, heat-reception of sucked refrigerant is suppressed.
