Abstract (en)

[origin: WO2014012866A1] An adjustment unit is proposed for a vehicle seat, wherein the adjustment unit is provided for adjusting the position and/or inclination of a component of the vehicle seat, wherein the adjustment unit has a handling element which is provided in a first direction for applying a first adjustment movement of the component, and in a second direction for applying a second adjustment movement of the component, wherein the adjustment unit is embodied in such a way that the first adjustment movement permits more rapid adjustment of the component than the second adjustment movement.
