Abstract (en)
[origin: WO2013167330A1] The invention relates to a shock-resistant device for mounting a marine engine (7) on an engine pedestal (8a, 8b) of a ship, having a stopping means for limiting a relative movement between the engine pedestal (8a, 8b) and the marine engine (7), in particular when the sea is rough, and having a catching means for fixing the marine engine (7) on the engine pedestal (8a, 8b), in particular during marine emergencies, wherein the stopping means and the catching means are provided together by a stopping and catching unit (1).
