Abstract (en)
[origin: WO2014013046A1] The invention relates to shrink packaging (1) for packing a series of containers (2). The packaging is characterised in that at least one incision line is provided in a first zone (3), said incision line including a series of perforations forming at least one partially detachable section (4) arranged to allow the extraction of at least one container (2) in a direction extending substantially from the lower part of the container (2) to the upper part thereof, said partially detachable packaging section (4) being larger than the cross-section of the at least one container (2) to be extracted. Moreover, the partially detachable section (4) is located on the periphery of the first zone (3).
