Abstract (en)
[origin: GB2504153A] A toilet sanitising block dispenser comprises a housing (2, fig 1) comprises at least one wall 4 defining an elongate enclosure configured to receive at least one toilet sanitising block 12, and a dispensing section contiguous with the housing and configured to receive at least a portion of the at least one sanitising block. The dispensing section, which may be a cap 20, includes at least one aperture (32, fig 1) configured to permit the ingress of fluid into the dispensing section to cause the dissolution of sanitising blocks contained within towards the dispensing section. The at least one wall of the housing may define a tubular enclosure 6 to slidably receive the at least one sanitising block. The housing may include a clip 36, which has a hook portion for attaching the housing to a toilet cistern. Preferably, the housing receives a plurality of sanitising blocks in a stacked arrangement.
