Abstract (en)  
[origin: WO2014012542A1] A dual clutch comprises a first friction disk clutch with a first and a second friction partner and a second friction disk clutch with a third and a fourth friction partner. The friction disk clutches are mounted axially with respect to each other, the second and third friction partners being mounted in a rotationally stable manner to each other. A first carrier is associated with the second friction partner and a separate second carrier is associated with the third friction partner and the two carriers are connected to each other in a rotationally stable manner.
