Abstract (en)  
[origin: WO2014015868A1] The invention relates to a dual clutch device comprising a first clutch assembly with a first clutch input and a first clutch output that can be connected to a first transmission input shaft, and a second clutch assembly with a second clutch input and a second clutch output that can be connected to a second transmission input shaft, the first clutch assembly being arranged axially adjacent to the second clutch assembly and the first clutch input and second clutch input being able to co-rotate. The second clutch input is mounted back to front with respect to the first clutch input.
