Abstract (en)

[origin: WO2014012875A1] The invention relates to a light-emitting assembly that has a light-radiating element (1) for radiating light, an optical element (2) for influencing the light, and a transparent insulating element (3), which is arranged in the path of the light, wherein the insulating element (3) is made of a material that is more thermally stable than the material of the optical element (2). The invention further relates to a lamp, in particular in the form of a spotlight, having such a light-emitting assembly.
