Abstract (en)
[origin: WO2014013144A1] The invention concerns a device for emitting a light beam (10) intended to form an image, the device comprising one or more sources (4, 5, 6), each emitting a laser-type beam (7, 8, 9), the device being designed to form the light beam (10) from the one laser beam (7, 8, 9) or from a combination of the laser beams, the device comprising attenuation means (12), disposed downstream of the source(s) (3, 4, 5), enabling the optical power of the light beam (10) to be varied, the attenuation means (12) comprising one or more retractable filters (20) which can be interposed in the beam or beams (7, 8, 9, 10).
